CHALLENGE

As an international retailer operating hundreds of stores, Old Navy is always on the lookout for energy saving ? and money saving ? opportunities. Such an opportunity presented itself in a company-wide relamping project that would place new, energy efficient lamps in their retail outlets. Having adopted an aggressive deadline, Old Navy turned to FSG Electric for this project.

SOLUTION

The project was scheduled for the busy shopping season of October through December. Facility Solutions Group teams removed old tube guards and F32T8 fluorescent lamps, and replaced them with 28-watt GE lamps. Additional fixtures were cleaned and repaired throughout this process. The average performance increase of individual lamps resulted in a 14% increase in reflective value. The project was completed on time, and Old Navy realized an annual reduction in electricity costs of some \$1,545,000.
