EV CHARGING CASE STUDY

San Antonio Installs First EVSA Electric Vehicle Charger at San Antonio Zoo

CHALLENGE

The City of San Antonio, TX. awarded Blink Charging a contract for the city's EVSA program aimed at increasing access to public EV charging infrastructure. Initially,

the award enlists the Company to deploy up to 140 Blink-owned level 2 charging ports and 3 DC fast-charging stations throughout the city. FSG is a contracted service install partner for Blink, and completed the installation of the first charging stations at the San Antonio Zoo. The installation included new switchgear and electrical service.

SOLUTION

Blink also was able to offer the city a cost-neutral proposal for the EV charging program through the Company's unique ownership model. Blink and the City of San Antonio will share the ongoing revenue from the charging stations.

"Having an EV charger at San Antonio Zoo compliments our focus on conservation," commented President & CEO San Antonio Zoo, Tim Morrow. "We are thrilled guests can charge their electric vehicles while enjoying time at the zoo."

RESULT

The new EV chargers are part of the state-wide Texas Volkswagen Environmental Mitigation Program (TxVEMP) through the Texas Commission on Environmental Quality (TCEQ). This historic 10.4 million dollar fund is specifically for establishing Level 2 charging across Texas in order to improve air quality.
