LIGHTING RETROFIT CASE STUDY

FSG provides LED lighting upgrades to Brookhaven Country Club's pickleball courts for 2023 USA Pickleball National Championships

CHALLENGE

Brookhaven Country Club is one of Invited's many premier properties and at the time of construction, it was one of the largest golf clubs in the world. The club hosted the 2023 USA Pickleball National Championships. Before hosting the tournament, however, the club needed to do lighting and electrical renovations to accommodate the thousands of spectators and athletes attending and playing in the tournament. Invited needed a partner that could handle the job, FSG Dallas was called upon to complete this tricky, time-sensitive project.

SOLUTION

The project was performed turnkey by FSG while working with the Invited team to design and specify the project. In addition to retrofitting outdated lighting, some of the existing electrical infrastructure needed to be relocated and redistributed for safety and better power distribution. Some light poles were also moved to accommodate the proper court layout and lighting design. The lighting was required to abide by Professional Pickleball Association (PPA) standards. Once the lighting and electrical work was complete, FSG's team fixed any outstanding wiring issues and ensured the lighting system met PPA standards.

RESULT

Club management and Invited Corporate had very positive feedback about the project and the work done by the FSG. John Fralick, VP of Racquet Sports for Invited gave the following feedback, "The team had 132 days to transform Brookhaven into the most Premier facility in the United States. FSG partnered with us to transform Brookhaven for the largest Pickleball tournament in the world. The lighting was incredible. 50,000 spectators and 2,500 players made Brookhaven the epicenter of Pickleball for 8 days".
