LIGHTING CASE STUDY

When Arby's wanted to capitalize on the benefits of LED lighting, they turned to FSG to help them get started.

CHALLENGE

Arby's, a prominent national quick-service dining chain, aimed to harness the advantages of LED lighting and found a reliable partner in Facility Solutions Group (FSG) to spearhead this transformative initiative. With a diverse portfolio of stores varying in design and age, Arby's faced the challenge of establishing a lighting standard that could cater to both new constructions and existing stores ineligible for a remodel. FSG emerged as the ideal collaborator to navigate this complex landscape.

SOLUTION

Understanding Arby's unique needs, FSG embarked on developing and delivering an LED lighting standard capable of deployment across the diverse array of store styles. This strategic move not only brought a fresh and contemporary look to the legacy stores but also ensured energy savings and efficiency benefits associated with LED lighting upgrades.

RESULT

Over a three-year period, FSG successfully executed 150 lighting upgrades for Arby's, resulting in not just significant energy bill reductions but also marked improvements in safety, security, and the overall visual appeal of their restaurants. The collaborative partnership between FSG and Arby's showcases how a well-crafted LED lighting upgrade can go beyond cost savings, positively impacting the ambiance, safety, and operational efficiency of a national dining chain.
