Owner

Emblem Health

Contract Type

Electrical Construction

Contract Amount

\$7,200,000.00

General Contractor

Caldwell Wingate

Electrical Contractor

FSG

CHALLENGE

When it comes to the construction of the electrical systems of a large healthcare facility, great care has to be taken to make sure everything is done precisely and carefully. After all, people's lives will depend on it! Add to that the need to perform the job efficiently, keeping the job on time and on budget, and the unique challenges of building a world-class medical facility quickly become obvious.

SOLUTION

In the healthcare vertical, FSG has built or renovated hundreds of facilities over its 40+ year history. For this project, FSG tapped into its vast experience to develop, implement, and deliver a world-class project for a first-class customer. From design to final punch list, FSG owned every part of the electrical construction on this project and even brought in FSG's lighting design team to develop the lighting design for the facility, a service that very few electrical contractors can offer. Additionally, FSG was able to offer to deliver low voltage services including structured cabling, fire alarm, and tele-data infrastructure for the facility's various communications systems.

RESULT

The collaboration between FSG and Emblem Health yielded transformative results for the medical facility. As a result of FSG's contributions, the treatment center now stands as a beacon of innovation and efficiency. The comprehensive electrical installations, lighting solutions, and specialized room fit-outs have collectively elevated the facility's capabilities, providing Emblem Health subscribers with state-of-the-art medical services in a groundbreaking environment.
