Technology

Contract Amount

\$218,500.00

Electrical Contractor

FSG

TECHNOLOGY CASE STUDY

FSG was contracted to provide and install the audio/visual systems for Emerson Project Management's Regulator Technologies world headquarters in McKinney, Texas.

CHALLENGE

When Emerson Process Management developed its Regulator Technologies world headquarters in McKinney, Texas, they needed a cutting-edge audio/visual system to support their operations. Spanning 128,000 square feet of office and warehouse space, the project required a comprehensive AV solution that would enhance communication, collaboration, and overall functionality. Emerson turned to FSG for its expertise in delivering high-quality, integrated AV systems.

SOLUTION

FSG's scope included outfitting the auditorium, executive boardroom, conference rooms, lunchroom, fitness center, and public spaces with advanced AV technology. The installation featured Crestron control systems—both wired and wireless—for seamless operation, as well as recessed ceiling-mounted projection screens, high-brightness Epson projectors, and distributed ceiling speakers for optimal audio reinforcement. A campus-wide paging system was also integrated to ensure clear communication throughout the facility.

RESULT

The result was a state-of-the-art AV setup that met Emerson's needs for both functionality and ease of use. By leveraging FSG's expertise, Emerson's new headquarters now benefits from a high-performance, user-friendly AV system that enhances meetings, presentations, and day-to-day operations across the entire campus.
