Electrical Contractor

FSG

CHALLENGE

When the Hospital Corporation of America (HCA) launched the largest expansion in Methodist Hospital's history, they needed partners with the experience and dedication to match the scale and sensitivity of the project. Spanning 445,000 square feet across Methodist Hospital and Methodist Children's Hospital, this ambitious development required seamless integration of new systems into a fully operational healthcare environment. FSG was selected by general contractor Skanska USA to provide complete electrical construction and signage solutions for the multi-year project.

SOLUTION

FSG was involved from the ground up, applying its extensive healthcare project experience to meet the highest standards of safety, reliability, and coordination. The FSG team worked closely with all trades and hospital stakeholders to ensure that each phase of construction—from critical care expansions to infrastructure upgrades—was executed with precision. Their consistent presence and proven capabilities helped maintain continuity and minimized disruptions to ongoing hospital operations.

RESULT

The success of FSG's work not only met initial expectations but also earned them continued involvement in additional phases of the project. FSG remains a trusted partner, now powering new developments such as a seven-story children's tower with a dedicated power plant, expanded emergency departments, enhanced women's and neonatal care facilities, and a multi-level parking garage. Their ongoing role highlights FSG's lasting impact on healthcare construction in San Antonio.
